Abstract

An HTML editor is a program for editing HTML, the markup of a web page. The HTML text editor we created has two sections namely code and output, the html code can be typed in the code section and the corresponding output will be displayed in the output section after the "Run" button is clicked. And the corresponding HTML file can be sent to and retrieved from the database.

1 Introduction

The HTML code can be typed in the code section and the output of that will be displayed in the output section of the page after clicking the "run" button. The name of the file can be typed at the top left corner of the page followed by clicking the save button, then the file name is sent to the database.
